

# Friezes

Plaster friezes are used to break up large expanses of wall or ceiling and can also be used alongside cornice.

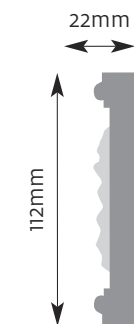

At A.R.M. Fibrous Plaster Mouldings, we design, manufacture and install a range of friezes, which can be used to complement existing cornices if necessary. While designing and manufacturing plaster friezes, our experts take great care to ensure every minute detail is perfectly crafted. If you need our advice to choose a design for your frieze plates, give us a call today.
